

Essential Oil Selection & Quality Control

Commitment To USDA Certified & Therapeutic Grade Oils

Essanté Organics is committed to excellence & absolute purity. Essential oils are the oldest form of medicine known to man. Only recently did the “pharmaceutical giants” begin to tamper with their purity, adding harmful, cost-effective, chemical compounds & in-turn adverse side effects. During the inhalation or topical application of a *pure* essential oil, you are inhaling & receiving the very essence and healing-intelligence of the plant it comes from. The vibration or energy of the plant unites with the innate intelligence inside each of us, allowing healing to occur. Essanté Organics understands when essential oils are produced at a low quality level, or when they are altered, by artificial means; the potency, precious intelligence & essence of those oils are forever changed. For this reason, Essanté Organics will never produce altered essential oils. Essential oils are highly permeable and bioavailable therefore it’s vital to ensure the oils you use are 100% free from all toxins. Each essential oil is guaranteed:

USDA Certified Organic: Grown & processed in accordance with NOP (National Organic Program) standards & guidelines, & is certified by Organic Certifiers. The certification process occurs twice; once at point of origin (at the farm, soil & plant level), then again at the distribution level, in the USA.

Wild Crafted: Grown & cultivated in the wild, NOT commercially farmed.

Pesticide Free: Grown & harvested without use of harmful pesticides.

Select Farmed: Ecologically responsible farming practices that produce ONLY distinct, therapeutic grade, select oils.

The Essanté R&D, Formulation & Production Team

Essanté Organics is home to the world's 2 leading essential oil experts. Both are proven to be top in their field of 100% certified organic essential oils, aromatherapies & herbal infusions. With 20 years experience as master herbalists in the 100% organic herbal, oil & therapy industries they are HIGHLY sought after for their knowledge, yet they are also HIGHLY discerning. They turned down the 2 largest Global Essential Oil & Aromatherapy Companies. They chose to join Essanté Organics' Formulation Team Because: *"Without question, this is the finest, 100% certified Toxic Free™ company we've met with, studied & authenticated."*

Origin: Every season, batch samples are shipped from the finest distilleries & farms from all over the world. Our certified Master Aroma Therapists & Scientists have traversed the globe, and have personally hand selected many of these farms, according to stringent guidelines. Here are some worldly examples: we obtain Lavender from the high altitude mountains of Bulgaria. We obtain our Frankincense from Ethiopia. We obtain Bergamot from Italy. Essanté Organics' scientists & formulation team members select herbs, plants, flowers bark & roots from their ingenious lands, because it allows superior delivery of true therapeutic grade oils, the finest, most potent oils on earth.

Strict Sourcing Criteria:

The following is a list of criteria Essanté Organics' team uses to select 100% therapeutic grade, USDA Certified organic oils:

1. Fair trade practices - no slave or child labor.
2. Ecological & sustainable - must not damage earth or the surrounding community during farming or distilling.
3. No animal testing.
4. The farm & distiller must have thorough knowledge on the correct time of day & season to harvest & distill essential oils for superior therapeutic effect. Here are two examples: Ylang-Ylang complete essential oil begins with the picking process. The Ylang-Ylang flower is picked at the peak hour, between 3:30am and 4:30am, then it is distilled that very same morning. Bulgarian, high-altitude Lavender is not distilled for at least 6 hours because distilling lavender too soon after harvest creates a poor grade Lavender. Distillation must be cold pressed unless warming is necessary. Heat must not exceed 115 degrees.
5. All oils must be USDA certified organic, wild crafted, pesticide free and/or select farmed.

6. Never use oils that have been denatured, reconstituted or mixed with other chemical compounds.
7. No genetically modified organisms (GMO's).
8. No artificial colors, oils, additives, scents or compounds of any kind.

Therapeutic Grade Testing & Approval Process:

1. The oil must be scientifically sound and demonstrate the proper aroma, color & viscosity according to our team's world-class training standards. Our team must also intuitively connect to the vibration life force of each oil. Essential oils must be alive with the essence and energy of the plant it is distilled from.
2. Oils are tested with GCMS, Gas Chromatography Mass Spectrometry units or Gas Chromatographic Spectrometers (right). This insures all correct therapeutic chemical components are present at the strict standard required for a true therapeutic effect. It has been said, our expert formulators are "human GC testers" & can sense the chemical components of an oil through their education & intuition, yet they also rely on this proven, scientific

method of measurable, quantifiable authentication to approve all oils.

Wild Ylang Ylang picked only in early morning

GCMS

*Gas Chromatography Mass Spectrometry
Specialized Testing Equipment*

Rejected or ... *“Signed, Sealed, Delivered, I’m Yours”*

Rejected vs. Approved:

Oil batches are rejected at the USA production level, if all tests & criteria (listed above) are not met & authenticated in full. It’s tough to get an 100% A+ grade from Essanté Organics’ Formulators. This “full pass or total fail” process ensures proven therapeutic results to you & every consumer.

Storage:

Essanté Organics 100% pure, organic, therapeutic grade essential oils are inventoried & handled with great love and care. Our pure oils are stored in a temperature controlled room. Batches are poured in small amounts so the revered oils are not exposed to air for long periods of time. At Essanté Organics, we understand the finer the essential oil, the faster it evaporates; thus we are dedicated to fiercely protecting each & every one of our beloved essential oils.

Packaging:

Essanté Organics Essential Oils are packaged in beautiful, 15ml, amber, glass bottles with tamper-proof caps. We protect the oils from oxygen degradation. Each is topped with a spill-proof emitter that allows you to gently tap & allow one drop of oil to exit at a time.

Contact your Essanté Executive today for pure, therapeutic grade, USDA Organic essential oils at the most competitive price points.
